THE BRAND ELECTRICIANS RELY ON

Stainless Steel Cable Tie Tensioner & Cutter Instructions

Step 1

Pull the trigger of the gun to rotate the tensioning reel until the gap is in the horizontal position

Step 2

Carefully arrange the cable tie around the objects to be bound.

Insert the excess cable tie into the tensioning reel gap.

Step 3

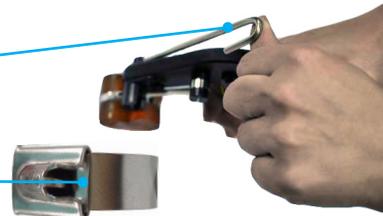

Operate the trigger to rotate the tensioning reel, this will tighten the cable tie. The excess tie will be wound around the tensioning reel.

Step 4

Operate the trigger until the tie is firmly fixed. Hold the trigger, and lift up the cutting arm to cut the cable tie.

Clean cut should be achieved every time

Step 5

After cutting the tie the excess will be collected on the tensioning reel and the extending safety bar will prevent the tie to rebound.

Step 6

The excess tie can now be removed from the tensioning reel and disposed of.

The process is complete.
